

OPM 662 - Business Analytics: Modeling and Optimization

Key topics:

- Applications of optimization models
- Business Analytics approaches
- Managerial insights and numerical studies
- Business Analytics tool for modelling and optimization

Grading: (6 ECTS)

- Assignments (individual and in groups) and written/implementation exam

Teachers: Prof. Dr. Raik Stolletz, Amir Foroughi, Matteo Biondi

First session: Wednesday, February 20, 2019 (room L7, 3-5, 3.58)

Minimize:

$$\sum_{i=1}^M z_i$$

Subject to:

$$\sum_{i=1}^M (x_{im} + y_{im}) \leq C - z_m \quad m = \underline{M} + 1, \dots, M$$

$$\sum_{i=1}^M (x_{im} + y_{im}) = 1 \quad i = 1, \dots, I$$

$$(M - m + 1)(x_{im} - x_{im}) \geq 0 \quad \forall (r, s) \in P$$

$$(M - m + 1)(y_{im} - y_{im}) \geq 0 \quad \forall (r, s) \in P$$

$$(M - m + 1)(y_{im} - y_{im}) \geq 0 \quad \forall (r, s) \in P$$

$$(M - m + 1)(y_{im} - y_{im}) \geq 0 \quad \forall (r, s) \in P$$

$$(M - m + 1)(y_{im} - y_{im}) \geq 0 \quad \forall (r, s) \in P$$

$$(M - m + 1)(y_{im} - y_{im}) \geq 0 \quad \forall (r, s) \in P$$

$$(M - m + 1)(y_{im} - y_{im}) \geq 0 \quad \forall (r, s) \in P$$

$$(M - m + 1)(y_{im} - y_{im}) \geq 0 \quad \forall (r, s) \in P$$

$$(M - m + 1)(y_{im} - y_{im}) \geq 0 \quad \forall (r, s) \in P$$

$$(M - m + 1)(y_{im} - y_{im}) \geq 0 \quad \forall (r, s) \in P$$

$$(M - m + 1)(y_{im} - y_{im}) \geq 0 \quad \forall (r, s) \in P$$

$$(M - m + 1)(y_{im} - y_{im}) \geq 0 \quad \forall (r, s) \in P$$

$$(M - m + 1)(y_{im} - y_{im}) \geq 0 \quad \forall (r, s) \in P$$

$$(M - m + 1)(y_{im} - y_{im}) \geq 0 \quad \forall (r, s) \in P$$

$$(M - m + 1)(y_{im} - y_{im}) \geq 0 \quad \forall (r, s) \in P$$

OPM 662 - Business Analytics: Modeling and Optimization

I Applications of optimization models

- Aggregated production planning
- Lot sizing and detailed scheduling
- Workforce planning
- Aircraft sequencing and scheduling

II Business Analytics approaches

- Mathematical modeling & optimization algorithms
- Heuristic solutions for large-scale problems
- Scenario approaches for robust planning

III Managerial insights and numerical studies

- Design of numerical studies
- Sensitivity analysis
- Interpretation of solutions

IV Practical insights

- Business Analytics tool for modeling and optimization
- Guest lecture by business analytics professionals
