### Auswertungsteil der offenen Fragen

#### Digitalization

Which aspects of online learning did you find positive?

- I don't need to rush to the classroom.
- Possibility to rewatch lecture recordings.
- The flexibility to rewatch lectures at a suitable time
- recording of the lectures

Which aspects of online learning did you find negative?

- It's hard to build connection between students and teacher. The online learning makes student less likely to speak out their opinion.
- Lack of personal contact in case discussion.
- Sometimes the internet connection prohibited active participation. I did not feel as well "connected" to the lecturer and the class as I usually feel in a normal classroom
- interation with the teacher can't be very fluent

#### **Open Questions**

What did you particularly like about this course?

- A lot of programming practice
- Being able to replicate certain analyses from actual papers!
- Many current research papers were included. They allowed for asking detailed questions during classes.
- Prof. Theissen is one of the best professors i have had so far! The course content is very challenging (but also interesting), but Prof. Theissen provided many examples and really helped me to understand the content and foster my interest in the topics!
- The chance to put theory into application
- The course is in combination with practical cases. That really push me to learn and sharpen my statistic software skills.

#### What should be improved?

I think discussions going forward should remain ungraded such that people can actually focus on doing research and not try too hard to participate just for the sake of participating.

I know this semester the discussion was not graded and I appreciated that a lot!

- The comments of the case evaluation is unclear sometimes that I do not know how to improve for the next time.
- Too much workload but too little link between case studies and course content. Also the criteria on grading each case study differ from each grader.
- too much workload
